An ion ( $\text{E}^{\pm n}$ ) is an atom or molecule that has a non-zero net electrical charge (its total number of electrons is not equal to its total number of protons). A cation is a positively-charged ion, while an anion is negatively charged.

### **Ion - Wikipedia**

Structural variation (also genomic structural variation) is the variation in structure of an organism's chromosome. It consists of many kinds of variation in the genome of one species, and usually includes microscopic and submicroscopic types, such as deletions, duplications, copy-number variants, insertions, inversions and translocations.

Regeneration of tissues using cells, scaffolds and appropriate growth factors is a key approach in the treatments of tissue or organ failure. Silk protein fibroin can be effectively used as a scaffolding material in these treatments.

Highlights TiO<sub>2</sub> photocatalysts from the viewpoint of structural design and applications are summarized. We classified TiO<sub>2</sub> photocatalysts into zero- to three-dimensional structures. The dimensionality of the structure of a TiO<sub>2</sub> photocatalysts affects its properties and functions. New applications of TiO<sub>2</sub> surfaces for wettability patterns ...

A catalytic process to transform C<sub>60</sub> into a series of open-cage fullerene derivatives has been developed.

This transformation encompasses a partially intermolecular [2+2+2] cycloaddition reaction between diynes and C<sub>60</sub>, followed by cage opening through a Rh-catalyzed diazomethane rearrangement.
