Amplifiers are used to increase the amplitude of a voltage or current, or to increase the amount of power available usually from an AC signal. Whatever the task, there are three categories of amplifier that relate to the properties of their output; 1. Voltage amplifiers. 2. Current amplifiers. 3. Power amplifiers.

BASIC LINEAR DESIGN 1.8 Doing a little simple arithmetic we then can come to the conclusion of eq. 1.1: Figure 1.6: Noninverting Amplifier gain Now we examine the noninverting case in more detail. Referring to Figure 1.6, the input voltage is applied to the noninverting terminal. The output voltage drives a voltage divider consisting of  $R_{fb}$  and  $R_{in}$ .
