Below is a table of amino acids produced and identified in the "classic" 1952 experiment, as published by Miller in 1953, the 2008 re-analysis of vials from the volcanic spark discharge experiment, and the 2010 re-analysis of vials from the H₂S-rich spark discharge experiment.

The Luria-Delbrück experiment (1943) (also called the Fluctuation Test) demonstrates that in bacteria, genetic mutations arise in the absence of selection, rather than being a response to selection. Therefore, Darwin's theory of natural selection acting on random mutations applies to bacteria as well as to more complex organisms. Max Delbrück and Salvador Luria won the 1969 Nobel Prize in ...

The lesson is designed around two sets of experiments. The first set demonstrates that amylase is a digestive enzyme that degrades starch into sugar, can do so repeatedly and, like many enzymes, is sensitive to acid.

Intense sweetness outcompetes alcohol reward in most but not all rats. Sweetness is a fundamental reward that is highly conserved between humans and other animals (). To tap into its value without the confound of caloric content, we used as alternative reward a solution of the noncaloric sweetener saccharin.

In the absence of doping, interface dipoles and other interfacial effects and assuming vacuum level alignment the energy barrier for charge carrier injection is in first approximation given by the energetic offset between the work functions of the used metals and the energy levels of the organic material.
