Human spaceflight (also referred to as crewed spaceflight or manned spaceflight) is space travel with a crew or passengers aboard the spacecraft. Spacecraft carrying people may be operated directly, by human crew, or it may be either remotely operated from ground stations on Earth or be autonomous, able to carry out a specific mission with no human involvement.

Human spaceflight - Wikipedia

Crohn's disease (CD) arises from defective intestinal innate immunity. Vitamin D has emerged as a major regulator of human innate immunity.

Environmental impact of estrogens on human, animal and plant life: A critical review

Environmental impact of estrogens on human, animal and

ABSTRACT. Biopreservation systems in foods are of increasing interest for industry and consumers. Bacteriocinogenic lactic acid bacteria and/or their isolated bacteriocins are considered safe additives (GRAS), useful to control the frequent development of pathogens and spoiling microorganisms in foods and feed.

El concepto de gen ha ido variando a lo largo del tiempo, conforme ha avanzado la ciencia que lo estudia, la genética: . Gregor Mendel en sus experimentos propuso la idea original del gen, aunque Å¶ no los denominó genes, sino factores, y vendrÄ¶an a ser los responsables de la transmisi3n de los caracteres de una generaci3n a la siguiente (lo que ahora llamamos genotipo).
