In computer science, the analysis of algorithms is the determination of the computational complexity of algorithms, that is the amount of time, storage and/or other resources necessary to execute them. Usually, this involves determining a function that relates the length of an algorithm's input to the number of steps it takes (its time complexity) or the number of storage locations it uses (its ...

In programming, algorithms perform specific functions to complete required tasks. Introduction to Algorithms, part of the Foundations of Programming course, will provide you with the fundamentals of using algorithms in programming. Simon also demonstrates the choices developers have of using different algorithms to accomplish the same tasks.

1. INTRODUCTION 1.1 A short introduction to Social Network Analysis. A network is made of two components : a list of the actors composing the network, and a list of the relations (the interactions between actors). As part of a mathematical object, actors will then be called vertices (nodes, in Gephi), and relations will be denoted as edges (edges, in Gephi).
