Chemical Process Dynamics and Controls Book II

Process Dynamics A process is a dynamical system, whose behavior changes over time. Control systems are needed to handle such changes in the process. Thus, it is important to understand the process dynamics when a control system is designed.

A Short Introduction to Process Dynamics and Control

Control: the use of process dynamics for the improvement of process operation and performance the use of process dynamics to alleviate the effect of undesirable (unstable) process behaviors. 29 Introduction What do we mean by process, plant or system?

Lecture Notes | Process Dynamics, Operations, and Control

Mathematical models of complex physical process, the development of which is characterized by some collection of temporal scales, are analyzed. A singularly-perturbed system of evolutionary operators in Banach space is used as a process model.
